workers, the manufacturing plants will not be able to work more than one shift per day.

- 3. Special efforts were to be concentrated on the telecommunication installations at Binz on Ruegen Island, Sargard and Torgelow. The Tfice for Economic Affairs is cooperating with the Ministry for Telecommunication in all matters concerning the above listed installations. All orders for these projects are now placed as government orders.
- by the end of 1952, the central post offices were abolished and are now replaced by 14 district post offices and 54 telephone exchanges. Each district office will be staffed by 50 employees. Each telephone exchange was to be staffed by 90 to 100 workers, including the line men. Thus far only 38 telephone exchanges were in operation. In early 1953, advanced planning provided for the establishment of the following offices which were to be financially independent but subordinate to the central telephone and telegraph administration:

Transmitting office; Long-distance communication office; Construction office.

- 5. In January 1953, all matters pertaining to radio were separated from the central telephone and telegraph administration and were in the future to be handled by the Central Institute for Radio Engineering. Herr Gradecki was in charge of the Institute. The government ordered that the technical department and certain offices of the radio advisory board be subordinate to the Central Institute for Radio Engineering. Thus far, all protests by the board were to no avail. Only the television department within the advisory board remained in existence. Herr Augustin was in charge of the television department. In early January 1953, the creation of a plant to manufacture radio transmitters and receivers sets was ordered.
- 6. In early March, the Entwurfs- und Planungsbuero der Deutschen Post (Designing and Planning Office of the German Post) was established and took over all projecting and designing work previously done by the Hauptabteilung Post und Fernmeldewesen. It was planned that the work of the HV Funk (Main Administration for Radio) was also to be turned ever to this office, which was located in the Scheckent, 12 to 14 Reichstagsufer, Berlin. The personnel of 16 to 18 persons was to be increased to about 40, including the chief Boden (fnu) and Graduate Engineer Alfred Krietsch who was previously chief referent FT 2 (telephone engineering) at the Ministerium fuer Post und Fernmeldewesen.
